Technical Skills

Front-end: React, TypeScript, JavaScript, Next.js, Vite, HTML, CSS, Tailwind CSS, TanStack Query, Zustand, Redux Toolkit, Jest, React Testing Library
Back-end: C#/.NET, Node.js, Express, NestJS, Java, Spring Boot, REST APIs, JUnit, Mockito, xUnit, Moq
Databases, Persistence & Cloud: PostgreSQL, MongoDB, Convex, Neon, Supabase, Prisma, Entity Framework, Spring Data JPA, Cloudflare R2
Architecture & Messaging: SOLID, Domain-Driven Design (DDD), RabbitMQ, Redis Pub/Sub, SignalR, Socket.IO
Tools: Git, GitHub, Docker, Railway, Swagger, Orval, Zod

Professional Experience

Full Stack Development Analyst, 3Code Sep. 2025 – Apr. 2026

- Optimized ticket loading under high-volume workloads by combining database indexing, API pagination, and TanStack Query caching to limit data returned per request and reuse previously fetched data.
- Automated REST API integration using Swagger and Orval, generating TypeScript types and hooks from documented endpoints and reducing manual integration effort by approximately 90%.
- Implemented Kanban boards for CRM and ticketing modules, providing support agents with clear visibility into task progress and improving ticket triage and tracking.
- Built KPI dashboards with support metrics by assignee, helping the team identify workload imbalances and distribute tasks more effectively.

Front-end Developer, iPrazos Aug. 2025 – Mar. 2026

- Architected the company's new responsive corporate website using Next.js and integrated it with the CRM REST API, automating lead routing into the sales pipeline and eliminating manual contact entry.

Full Stack Developer, 3Code Jan. 2025 – Aug. 2025

- Developed user interfaces and platform features using React, TypeScript, and Vite, integrating frontend screens with REST APIs and implementing interactive user workflows.
- Built landing pages with Next.js and technical documentation with Mintlify and MDX to showcase products and improve access to platform information.

Projects

Flock – AI-Powered Event Media Platform flock.cam

- Contributed to the full-stack development of a platform built with Next.js, Convex, and Cloudflare R2 for sharing event photos and videos through QR codes.
- Integrated AI-powered features using the **GPT-5.6 Luna** model for image processing and automated event recap generation (Wrapped).

Lyra Chat – Real-Time Chat Application lyra-chat-five.vercel.app

- Developed and deployed a production chat application using React, TypeScript, and .NET 8.
- Implemented real-time communication with SignalR, PostgreSQL data persistence, and Google OAuth 2.0 authentication.

Flow – Real-Time Notification System github.com/yyurimelo/flow

- Built a notification API using Express, TypeScript, Prisma, and MongoDB, integrating RabbitMQ, Dockerized workers, Redis Pub/Sub, and Socket.IO for real-time delivery and asynchronous processing, enabling notification workloads to scale without blocking the application.

Student Council E-commerce Platform – Capstone Project

- Digitized the sales workflow for school uniforms and merchandise by building a platform with Next.js, NestJS, and MongoDB to replace manual orders and spreadsheets.
- Streamlined the student council's sales operations, enabling more than 100 sales in the first month after launch.

Education

Associate Degree in Systems Analysis and Development, UniAnchieta Jul. 2025 – Present
Technical Diploma in IT, CEFET/RJ Apr. 2022 – Jan. 2025
